

# Sauron

Scalable multidimensional AI situation awareness solution for protecting European ports

Prevention, detection, response and mitigation of the combination of physical and cyber threats to the European ports

Command & Control Centre

## Main objective

The vision of SAURON is to provide a multidimensional yet installation-specific Situational Awareness (SA) platform to help port operators anticipate and withstand potential cyber, physical or combined security threats to their freight and cargo business and to the safety of their employees, visitors, passengers and citizens in the vicinity.
